Epoxy Resin Sinks

Flanged Drop-In Sinks

Introduced by our company in 1992, LabTops epoxy resin Drop-In sinks are becoming the standard in laboratories. Their clean lines and flush mounting give both new and remodeled labs a more modern appearance.

Flush mounting eliminates the area under the work surface lip, inherent with undermount sinks, where bacteria commonly forms, making sink area easier to keep clean. Drop-In sinks eliminate the need for sink supports allowing more usable cabinet storage area.

When there is a need for an epoxy resin double sink configuration, a pair of Drop-In sinks are less expensive and easier to install.

LabTops epoxy resin Drop-In sinks can also be specified with many other types of work surface material.

All exterior edges and corners of LabTops Drop-In sinks are rounded for the user's protection.

LabTops offers you the greatest number of Drop-In sink sizes in the industry.

ADA Compliant Flanged Drop-In Sinks

Three sizes of ADA compliant Drop-In sinks are now available. These sinks, like all LabTops Drop-In sinks, are flushed mounted, eliminating the need for sink supports. The tubs of these special sinks are rounded on the exterior sides and bottom for the user's comfort and protection. Plumbing outlets are located in the right rear corner, away from the user.

ADA compliance appears to require a 34" maximum height from the floor to the top of the work surface [J], and a clearance of at least 27" from the floor to the closest obstruction [K].
